Petroleum Engineers, Inc. was founded to provide the oil industry with professional engineers, wellsite supervisors and technical services at a moments notice, worldwide. Founded in 1970, PEI has responded to the needs of the industry with quality manpower. Supported by a large and diverse customer base, PEI provides drilling, workover / completion, engineering, production management, design engineering and construction services to major and independent operators throughout the world.

Expert wellsite supervision and daily contact with "field operations" are the key elements that make PEI one of the industry's most respected engineering firms.

Our team of highly trained field consultants backed by an expert in-house engineering staff provides engineering and technical services on a well or project basis 365 days a year.

With over 200 years of combined experience, Petroleum Engineers, Inc. can get the job done!

Petroleum Engineers, Inc.

Petroleum Engineers, Inc. has provided engineering, production operations management, and other technical services to the petroleum industry since 1970 and is one of the most respected consulting firms in the business. PEI provides services in all phases of petroleum and reservoir engineering; operations management; equipment design; completion and workover programs through the construction and operation of production facilities and pipelines.

Services, such as permitting, licensing, engineering, well planning, workover recommendations, cost estimates (AFE's) including justification for workovers or future developments of the lease, on-site supervision, plugging and abandoning operations, environmental compliance work, state and regulatory reporting and compliance, contract pumping services, etc., are all offered at competitive industry rates or at actual cost. In addition, we process invoices and distribute production revenue for royalty and working interest owners.

PEI's field production group offers accredited and seasoned personnel with years of practical hands-on production experience to optimize production operations. Our production engineers supervise well operations and determine the most efficient producing rates. This includes optimizing the well's performance and deliverability through constant analysis, which enables us to anticipate and resolve problems promptly and effectively.
